

Issue of Share Certificates of Steam Locomotive 52 8055

In an exclusive and limited second series, DLM is offering the opportunity to acquire share certificates in its **modern steam** locomotive 52 8055, at present the most progressive and technically advanced large steam locomotive worldwide.

Share certificates are issued at 1000 Swiss Francs per piece and entitle the buyer to the following unique privileges:

- Each buyer receives an individually numbered locomotive share issued specifically in his/her name
- Each buyer's name is engraved on the stylish buyer's plaque in the cab of the locomotive
- Each buyer receives an invitation for an exclusive cab-ride aboard 52 8055 on a Swiss mainline
- Each buyer receives a voucher worth 50 Swiss Francs for use on any steam special of 52 8055

52 8055 was originally built in 1943 as 52 1649, then re-built first in 1962 by the East German Railways (DR) to the improved 52.80 class and then again substantially modernized in 1998/99 by the Swiss Locomotive and Machine Works, now DLM. Employing the **modern steam** technology developed for the new rack tanks, such as light-oil firing, sealed roller-bearings on all axles and motion, thermally insulated boiler and cylinders, Lempor exhaust system and much more, it is the world's most modern and environmentally clean standard gauge steam locomotive. The issue of new locomotive share certificates is used for the further technical development and refinement of 52 8055.

Share certificates can be acquired directly from DLM. Please transfer the desired amount to:
